PROFILE SUMMARY

Backend engineer with **4+ years** building distributed microservices, REST APIs, and data pipelines at scale. Maintained open-source SDKs with **21M+ monthly installs**, shipped Java services handling **4,000 RPS** for revenue-critical flows, and built real-time streaming pipelines ingesting **13k events/sec**. Proficient AI-assisted developer — built and ship features using LLM-driven tooling daily. Strong in test automation, CI/CD, and clean API design.

EXPERIENCE

Software Development Engineer 2, Authn-SDKs Auth0 (Okta) <i>Primary maintainer of nextjs-auth0 (21M+ monthly downloads, 141% growth in tenure)</i>	July 2024 – Present Bangalore, India
REST APIs & Integrations: Designed and delivered API contracts for token exchange, DPoP, and org-scoped auth across Next.js, SPA, and Node SDKs. Owned integration with external identity providers and downstream services. 31 releases across 3 packages in 16 months. New SDK (auth0-hono): Built and shipped open-source SDK from scratch. 8,100+ lines of code, 291 tests, multi-runtime (Node, Cloudflare Workers, Deno, Bun). Shipped in 4 weeks. Security: Patched critical Next.js cache poisoning vulnerability affecting all Next.js users globally. Owned incident coordination and cross-team fix rollout. MFA Step-Up: Shipped full MFA flow (challenge, verify, enroll) for Next.js SDK. Design to production in 5 weeks. Multi-Domain Support: Rewired SDK from single-domain to dynamic per-request resolution. Zero breaking changes, sessions auto-migrate. AI-Assisted Development: Built and use Forge — an agentic AI workflow engine — daily to accelerate feature delivery. Used to ship two major production features. Proficient with LLM tools for code generation, review, and debugging.	
Software Development Engineer 1, B2B-Subscriptions ZEE5 <i>Scaling video streaming platform for 65M+ monthly active users</i>	August 2022 – July 2024 Bangalore, India
Subscription Engine: Built async subscription and payment orchestrator with automatic failover for multi-step entitlement flows. Hit 99.9% uptime on revenue-critical B2B flows. Directly analogous to earned-wage and payroll disbursement workflows. Mirage: Built high-throughput token exchange service handling 4,000 requests/sec for 40M+ B2B users (60% of ZEE5's revenue). Java backend with async processing and retry. Cloud Migration: Led zero-downtime AWS to GCP migration including PostgreSQL to Cloud Spanner for 5M+ daily events. Full schema migration, query optimization, rollback strategy. Cut DB latency to under 10ms. Platform Rewrite: Migrated Node.js services to Java WebFlux. 10x throughput, zero regressions, zero downtime.	

KEY PROJECTS

Forge: Agentic AI Development Workflow Engine <i>TypeScript, Claude Code, State Machines</i>
- Built multi-phase agentic AI orchestrator that automates the full software dev lifecycle. Used daily in production feature delivery — shipped MFA and Multi-Domain features with it. - Adopted by team. Directly embodies the AI-assisted development culture EarnIn values.
OPAL: Real-time Log Analytics (Auth0 Hackathon Finalist) <i>ClickHouse, S3, Kafka, Benthos, Cube.js</i>
Built streaming data pipeline ingesting 13k events/sec with column-oriented storage (130:1 efficiency). Estimated \$70k/month savings. Live dashboards via RESTful APIs.

TECHNICAL SKILLS

Languages: TypeScript, Java, Python, Go
Frameworks: Spring WebFlux, Node.js, Next.js, Hono, React
Databases: PostgreSQL, Cloud Spanner, MySQL, Redis, ClickHouse
Streaming / Messaging: Kafka, event-driven architecture
Infrastructure: Docker, GCP, Cloudflare Workers, CI/CD
AI / Tooling: Agentic AI orchestration, LLM-driven development (daily), prompt engineering
Practices: REST API design, TDD, functional & integration testing, Agile, microservices

EDUCATION

BMSIT, Bangalore <i>Bachelor of Technology, Computer Science</i>	2018 – 2022 Bangalore, India
