PROFILE SUMMARY

Software Engineer with **4+ years** building **high-throughput distributed systems and infrastructure**. Designed and operated async task services handling **4,000 TPS** for **40M+ users**, led zero-downtime cloud migrations, and maintained **99.9% uptime** on revenue-critical flows. Currently at Auth0 (Okta) owning production reliability and architecture across SDK infrastructure with **21M+ monthly installs**. Experienced in on-call incident response, distributed system design, and cross-team platform ownership.

EXPERIENCE

Software Development Engineer 2, Authn-SDKs | Auth0 (Okta)

July 2024 – Present

Primary maintainer of nextjs-auth0 (21M+ monthly downloads, 141% growth in tenure)

Bangalore, India

- **Technical Direction:** Authored 15+ design docs adopted across teams. Proposed and got approval for 10+ architecture decisions in cross-team reviews. Unblocked stalled features by building working prototypes instead of writing longer docs.
- **Security:** Patched critical Next.js cache poisoning vulnerability (affected all Next.js users globally) across Auth0 SDK ecosystem. Owned and resolved auth parameter injection bugs and coordinated fixes with security team.
- **Cross-SDK Features:** Delivered DPoP (proof-of-possession tokens), token exchange, and organization-scoped auth across Next.js, SPA, and Node SDKs. Cut 31 releases across 3 packages in 16 months.
- **Multi-Domain Support:** Rewired SDK from single-domain to dynamic per-request domain resolution. Customers with multiple brands now use one SDK instance. Zero breaking changes, sessions auto-migrate.
- **New SDK (auth0-hono):** Built and shipped a new authentication SDK for the Hono framework. 8,100+ lines of code, 291 tests, runs on Node, Cloudflare Workers, Deno, and Bun. Gap analysis to shipping in 4 weeks.
- **Multi-Factor Auth (MFA):** Shipped full MFA step-up support for Next.js SDK. Design to production in 5 weeks.

Software Development Engineer 1, B2B-Subscriptions | ZEE5

August 2022 – July 2024

Scaling video streaming platform for 65M+ monthly active users

Bangalore, India

- **Mirage:** Built high-throughput async token exchange service handling **4,000 requests/sec**, powering cross-platform streaming for 40M+ B2B users (60% of ZEE5's revenue base).
- **Subscription Engine:** Built async subscription orchestrator with automatic failover. Hit **99.9% uptime** on revenue-critical B2B flows while cutting cloud spend. Designed for graceful degradation under load.
- **Cloud Migration:** Led zero-downtime AWS to GCP migration including PostgreSQL to Cloud Spanner for 5M+ daily auth events. Cut DB latency to **under 10ms**.
- **Platform Rewrite:** Moved Node.js services to Java WebFlux. **10x throughput**, zero regressions, zero customer-facing downtime.

KEY PROJECTS

OPAL: Real-time Log Analytics (Auth0 Hackathon Finalist) | ClickHouse, S3, Benthos, Cube.js

- Built analytics engine ingesting **13k events/sec** for customer usage insights. Estimated **\$70k/month savings** over existing solution.
- Column-oriented storage with 130:1 write-read efficiency. Live dashboards and log search integrated into product.

Forge: AI Development Workflow Engine | Claude Code, TypeScript, State Machines

- Built a multi-phase AI orchestrator that automates the full software lifecycle: requirements, design, implementation, review, and documentation.
- Used to ship two major SDK features at Auth0. Adopted by team for AI-assisted development.

TECHNICAL SKILLS

Infrastructure: ClickHouse, PostgreSQL, Cloud Spanner, Redis, Kafka, Cloudflare Workers, Docker

Languages: TypeScript, Java, Python, Go, Rust (learning)

Frameworks: Node.js, Spring WebFlux, Next.js, Hono, Vitest

Auth/Identity: OAuth 2.0/2.1, OIDC, DPoP, Token Exchange, Session Management

AI/Tooling: Claude Code, LLM-driven automation, RAG pipelines, prompt engineering

Practices: Distributed systems design, on-call incident response, zero-downtime migrations, release management

EDUCATION

BMSIT, Bangalore

Bachelor of Technology, Computer Science

2018 – 2022

Bangalore, India
