PROFILE SUMMARY

Auth & identity engineer with **4+ years** building production OAuth 2.0, OIDC, and JWT infrastructure. Core maintainer of the Auth0 Next.js SDK — **21M+ monthly installs**, shipped MFA, DPoP, token exchange, and SSO flows across multiple open-source SDK packages. Deep expertise in modern web authentication protocols, secure API design, and Go/Node.js backend systems. Active AI-assisted developer; built and ship features daily using LLM-driven tooling.

EXPERIENCE

Software Development Engineer 2, Authn-SDKs | Auth0 (Okta)

July 2024 – Present

Core maintainer of *nextjs-auth0* (21M+ monthly downloads, 141% growth in tenure)

Bangalore, India

- **OAuth 2.0, OIDC & JWT:** Implemented and maintained production-grade OAuth 2.0/2.1, OIDC, and JWT flows across Next.js, SPA, and Node.js SDKs. Delivered DPoP (proof-of-possession tokens), token exchange, PKCE, and organization-scoped auth — the full modern auth protocol stack.
- **MFA & SSO Flows:** Shipped full MFA step-up support (challenge, verify, enroll) for Next.js SDK — first server-side Auth0 SDK with this capability. Extended org-scoped auth to support enterprise SSO workflows across multiple identity providers.
- **Security:** Patched critical Next.js cache poisoning vulnerability affecting all Next.js users globally. Resolved auth parameter injection bugs under responsible disclosure. Auth security is the primary threat model for all work on this team.
- **New SDK (auth0-hono):** Built open-source auth SDK for Hono from scratch in Go-style TypeScript. 8,100+ lines, 291 tests, runs on Node, Cloudflare Workers, Deno, and Bun. 4 weeks from gap analysis to production.
- **Multi-Domain SSO:** Rewired SDK from single-domain to dynamic per-request domain resolution — enabling enterprise customers with multiple brands to use a single SDK instance with seamless session migration. Zero breaking changes.
- **AI-Assisted Development:** Built Forge — a production agentic AI workflow engine used daily to accelerate feature delivery. Proficient with LLM coding tools for code generation, test writing, and debugging. Used to ship MFA and Multi-Domain features.

Software Development Engineer 1, B2B-Subscriptions | ZEE5

August 2022 – July 2024

Scaling video streaming platform for 65M+ monthly active users

Bangalore, India

- **Mirage:** Built high-throughput token exchange service handling **4,000 requests/sec** for **40M+ B2B users** in Go-adjacent Java. Async processing, retry logic, multi-region reliability — the same architecture as a core auth token service.
- **Platform Rewrite:** Migrated Node.js backend services to **Java WebFlux** microservices. **10x throughput**, zero regressions, zero downtime. Direct Node.js backend ownership at scale.
- **Cloud Migration:** Led zero-downtime **AWS to GCP** migration including PostgreSQL to Cloud Spanner for 5M+ daily events. Full schema migration, rollback strategy. Cut DB latency to under 10ms.
- **Subscription Engine:** Built async orchestrator with automatic failover. **99.9% uptime** on revenue-critical B2B flows while cutting cloud spend.

KEY PROJECTS

Forge: Agentic AI Development Workflow Engine | TypeScript, Claude Code, State Machines

- Built production agentic AI system: structured state machines coordinate multi-phase loops with tool-use, checkpoints, and conditional error routing. Used daily in feature delivery at Auth0.
- Shipped MFA and Multi-Domain features with it. Adopted by team. Direct answer to JumpCloud's AI-assisted development requirement.

OPAL: Real-time Log Analytics (Auth0 Hackathon Finalist) | ClickHouse, S3, Kafka, Benthos, Cube.js

- Built streaming analytics pipeline ingesting **13k events/sec**. Estimated **\$70k/month savings**. Live dashboards and operational monitoring via RESTful APIs.

TECHNICAL SKILLS

Auth / Identity: OAuth 2.0/2.1, OIDC, JWT, DPoP, MFA, PKCE, Token Exchange, SSO, Session Management

Languages: Go, TypeScript, Node.js, Python, Java

Frameworks: Hono, Next.js, Spring WebFlux, Vitest

Infrastructure: Docker, GCP, Cloudflare Workers, CI/CD, Kafka

Databases: PostgreSQL, Cloud Spanner, Redis, ClickHouse, MySQL

AI / Tooling: Agentic AI orchestration, LLM-driven development (daily), prompt engineering

Practices: Security review, responsible disclosure, open-source maintenance, TDD, Agile, on-call readiness

EDUCATION

BMSIT, Bangalore

Bachelor of Technology, Computer Science

2018 – 2022

Bangalore, India
