PROFILE SUMMARY

Software Engineer with **4+ years** building **high-throughput, low-latency distributed systems**. Scaled token services to **4,000 TPS** for **40M+ users**. Primary maintainer of open-source SDKs with **21M+ monthly installs** across a large monorepo. Shipped zero-to-one systems end-to-end — from design doc to production — with a strong focus on performance, reliability, and observability. Actively building AI-driven infrastructure tools; eager to go deeper on ML inference and serving stacks.

EXPERIENCE

Software Development Engineer 2, Authn-SDKs | Auth0 (Okta)

July 2024 – Present

Primary maintainer of nextjs-auth0 (21M+ monthly downloads, 141% growth in tenure)

Bangalore, India

- **New SDK (auth0-hono):** Built a production SDK from zero across a complex monorepo: 8,100+ lines of code, 291 tests, runs on Node, Cloudflare Workers, Deno, and Bun. Gap analysis to shipping in 4 weeks.
- **Technical Direction:** Authored 15+ design docs adopted across teams. Drove 10+ architecture decisions in cross-team reviews. Built working prototypes to unblock stalled designs.
- **Multi-Factor Auth (MFA):** Designed and shipped full MFA step-up support. First server-side Auth0 SDK with this capability. Design to production in 5 weeks.
- **Cross-SDK Features:** Shipped DPoP, token exchange, and org-scoped auth across 3 SDKs. 31 releases, 16 months. Consistent API surface, zero regressions.
- **Security:** Patched critical Next.js cache poisoning vulnerability affecting all Next.js users globally. Owned root cause, fix, and coordinated rollout across ecosystem.
- **Multi-Domain Support:** Rewired SDK from single-domain to dynamic per-request resolution. Zero breaking changes, sessions auto-migrate.

Software Development Engineer 1, B2B-Subscriptions | ZEE5

August 2022 – July 2024

Scaling video streaming platform for 65M+ monthly active users

Bangalore, India

- **Mirage – High-Throughput Token Service:** Built from scratch, handling **4,000 req/sec** for **40M+ B2B users** (60% of ZEE5's revenue). Low-latency, horizontally scalable, production-hardened.
- **Cloud Migration:** Led zero-downtime AWS to GCP migration, PostgreSQL to Cloud Spanner for **5M+ daily events**. Cut DB latency to **under 10ms**. Built full observability stack from scratch.
- **Platform Rewrite:** Migrated Node.js services to Java WebFlux (reactive). **10x throughput**, zero regressions, zero customer-facing downtime.
- **Subscription Engine:** Built async orchestrator with automatic failover. **99.9% uptime** on revenue-critical flows. Reduced cloud spend meaningfully.

KEY PROJECTS

Forge: AI Development Workflow Engine | TypeScript, State Machines, Claude API

- Built a multi-phase AI orchestrator that automates the full software lifecycle: requirements, design, implementation, review, and documentation.
- Runs as a standalone inference pipeline — each phase is a stateful node with its own prompt context, tool calls, and output schema. Used to ship two major SDK features in production.

OPAL: Real-time Log Analytics (Auth0 Hackathon Finalist) | ClickHouse, S3, Kafka, Benthos, Cube.js

- Built data ingestion and processing pipeline handling **13,000 events/sec** with **130:1 write-read efficiency** using column-oriented storage.
- Estimated **\$70k/month savings** over existing solution. Live dashboards and log search integrated into product.

LightRAW: AI-Powered Batch Processing Pipeline | Python, Claude API, RawTherapee

- Prompt-driven image processing system: plain-English instructions to structured parameter extraction to batch application across hundreds of files.
- Demonstrates LLM-as-orchestrator pattern, structured output parsing, and batch job design.

TECHNICAL SKILLS

Languages: Python, Go, TypeScript, Java

Systems: High-throughput services, distributed systems, event-driven architectures, low-latency APIs, horizontal scaling

Infra / Data: ClickHouse, PostgreSQL, Cloud Spanner, Redis, Kafka, Cloudflare Workers, Docker

Observability: Metrics, distributed tracing, structured logging, alerting pipelines

AI / ML: LLM orchestration, inference pipelines, RAG, prompt engineering, Claude API

Practices: Design-doc-driven delivery, monorepo navigation, zero-to-one delivery, security review, open-source maintenance

EDUCATION

BMSIT, Bangalore

Bachelor of Technology, Computer Science

2018 – 2022

Bangalore, India
