PROFILE SUMMARY

Software Engineer with **4+ years** building **high-throughput async platform services** used by millions. Designed event-driven systems processing **4,000+ TPS**, built async orchestration primitives with **99.9% uptime**, automatic failover, and retry semantics. At Auth0 (Okta), owns SDK infrastructure serving **21M+ monthly installs** across multiple engineering teams — shipping platform APIs, internal tooling, and distributed system abstractions. Track record of building platforms that internal developers adopt, with a focus on reliability, observability, and clean developer experience.

EXPERIENCE

Software Development Engineer 2, Authn-SDKs | Auth0 (Okta)

July 2024 – Present

Platform owner, nextjs-auth0 (21M+ monthly downloads, 141% growth in tenure)

Bangalore, India

- **Technical Direction:** Authored 15+ design docs adopted across teams. Drove 10+ architecture decisions in cross-team reviews. Built working prototypes to unblock stalled platform features instead of writing longer docs.
- **Cross-SDK Platform Features:** Delivered DPoP, token exchange, and organization-scoped auth as reusable primitives across Next.js, SPA, and Node SDKs — a platform abstraction used by multiple product teams. Cut 31 releases across 3 packages in 16 months.
- **New SDK (auth0-hono):** Built and shipped authentication SDK for the Hono framework from scratch. 8,100+ lines, 291 tests, runs on Node, Cloudflare Workers, Deno, and Bun. Designed for developer ergonomics — gap analysis to GA in 4 weeks.
- **Multi-Domain Support:** Rewired SDK from single-domain to dynamic per-request domain resolution. Zero breaking changes, sessions auto-migrate — internal teams adopted without migration overhead.
- **Security:** Patched critical Next.js cache poisoning vulnerability across SDK ecosystem. Owned auth parameter injection bugs end-to-end, coordinated fixes with security team.
- **Multi-Factor Auth (MFA):** Shipped full MFA step-up support for Next.js SDK. First server-side Auth0 SDK with this capability. Design to production in 5 weeks.

Software Development Engineer 1, B2B-Subscriptions | ZEE5

August 2022 – July 2024

Scaling video streaming platform for 65M+ monthly active users

Bangalore, India

- **Subscription Engine:** Built async event orchestrator with automatic failover, retry semantics, and graceful degradation. Powered revenue-critical B2B subscription lifecycle flows at **99.9% uptime** while cutting cloud spend.
- **Mirage:** Built high-throughput async token exchange service handling **4,000 requests/sec** for 40M+ B2B users (60% of ZEE5's revenue base). Designed for low-latency, stateless, horizontally scalable delivery.
- **Cloud Migration:** Led zero-downtime AWS to GCP migration — PostgreSQL to Cloud Spanner for 5M+ daily events. Cut DB latency to **under 10ms**. Full observability maintained throughout.
- **Platform Rewrite:** Moved Node.js services to Java WebFlux. **10x throughput**, zero regressions, zero customer-facing downtime.

KEY PROJECTS

OPAL: Real-time Log Analytics (Auth0 Hackathon Finalist) | ClickHouse, S3, Benthos, Cube.js

- Built event ingestion pipeline processing **13k events/sec** with column-oriented storage at 130:1 write-read efficiency. Estimated **\$70k/month savings** over existing solution.
- Full observability layer: live dashboards and log search showing what triggered each event, delivery status, and outcome — integrated into product.

Forge: AI Development Workflow Engine | Claude Code, TypeScript, State Machines

- Built multi-phase AI orchestrator automating the full software lifecycle: requirements, design, implementation, review, documentation.
- Used to ship MFA and Multi-Domain SDK features at Auth0. Adopted by team for AI-assisted development.

TECHNICAL SKILLS

Infrastructure: Kafka, Redis, ClickHouse, PostgreSQL, Cloud Spanner, Cloudflare Workers, Docker

Languages: TypeScript, Java, Go, Python, Rust (learning)

Frameworks: Node.js, Spring WebFlux, Hono, Next.js, Vitest

Auth/Identity: OAuth 2.0/2.1, OIDC, DPoP, Token Exchange, Session Management

AI/Tooling: Claude Code, LLM-driven automation, RAG pipelines, prompt engineering

Practices: Event-driven architecture, async orchestration, zero-downtime operations, platform API design, observability

EDUCATION

BMSIT, Bangalore

Bachelor of Technology, Computer Science

2018 – 2022

Bangalore, India
