PROFILE SUMMARY

Full-stack Software Engineer with **4+ years** building **customer-facing products** that real businesses depend on. Shipped features end-to-end across TypeScript, React, and Node.js — from UI flows to backend pricing and policy logic. Strong ownership instinct: treats features as products, not tickets. Previously scaled services to **4,000 TPS** for **40M+ users** and maintained open-source SDKs with **21M+ monthly installs**. AI-native in daily workflow.

EXPERIENCE

Software Development Engineer 2, Authn-SDKs Auth0 (Okta) <i>Primary maintainer of nextjs-auth0 (21M+ monthly downloads, 141% growth in tenure)</i>	July 2024 – Present <i>Bangalore, India</i>
New SDK (auth0-hono): Owned and shipped a new full-stack authentication SDK from scratch — 8,100+ lines of code, 291 tests, running on Node, Cloudflare Workers, Deno, and Bun. Gap analysis to production in 4 weeks. Multi-Factor Auth (MFA): Shipped end-to-end MFA step-up support — frontend challenge flows to backend factor verification and enrollment. First server-side Auth0 SDK with this capability. Design to production in 5 weeks. Multi-Domain Support: Rewired SDK from single-domain to dynamic per-request domain resolution. Zero breaking changes, sessions auto-migrate. Directly unblocked multi-brand customers. Cross-SDK Features: Delivered DPoP, token exchange, and org-scoped auth across Next.js, SPA, and Node SDKs. Cut 31 releases across 3 packages in 16 months. Security: Patched critical Next.js cache poisoning vulnerability affecting all Next.js users globally. Coordinated fix across SDK ecosystem with security team. Technical Direction: Authored 15+ design docs adopted across teams. Unblocked stalled features by shipping working prototypes over writing longer docs.	
Software Development Engineer 1, B2B-Subscriptions ZEE5 <i>Scaling video streaming platform for 65M+ monthly active users</i>	August 2022 – July 2024 <i>Bangalore, India</i>
Subscription Engine: Built async subscription orchestrator with automatic failover powering revenue-critical B2B flows. 99.9% uptime, reduced cloud spend. Mirage: Built token exchange service handling 4,000 req/sec for 40M+ B2B users — the core of cross-platform entitlement and access control. Cloud Migration: Led zero-downtime AWS to GCP migration — PostgreSQL to Cloud Spanner for 5M+ daily auth events. DB latency under 10ms. Platform Rewrite: Moved Node.js services to Java WebFlux. 10x throughput, zero regressions, zero customer-facing downtime.	

KEY PROJECTS

OPAL: Real-time Log Analytics (Auth0 Hackathon Finalist) <i>ClickHouse, S3, Benthos, Cube.js</i>
Built analytics engine ingesting 13k events/sec for customer usage insights. Estimated \$70k/month savings over existing solution. Live dashboards integrated into product.
Forge: AI Development Workflow Engine <i>TypeScript, Claude, State Machines</i>
Multi-phase AI orchestrator automating the full software lifecycle: requirements, design, implementation, review, and documentation. Used to ship production SDK features.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Java, Python, Go
Frontend: React, Next.js, Hono
Backend: Node.js, Spring WebFlux, REST APIs, Vitest
Auth/Identity: OAuth 2.0/2.1, OIDC, DPoP, MFA, PKCE, Token Exchange, Session Management
Infrastructure: PostgreSQL, Cloud Spanner, Redis, Kafka, Cloudflare Workers, Docker, ClickHouse
Practices: Full-stack ownership, design-doc-driven delivery, security review, open-source maintenance, AI-native workflow

EDUCATION

BMSIT, Bangalore <i>Bachelor of Technology, Computer Science</i>	2018 – 2022
