PROFILE SUMMARY

Distributed systems engineer with **4+ years** building high-throughput Java microservices and open-source platform software at scale. Core maintainer of the Auth0 Next.js SDK — an OSS product with **21M+ monthly installs** and the same OSS-to-enterprise dynamic as Apache Hudi. Scaled production services to **4,000 RPS** for 40M+ users and led zero-downtime AWS-to-GCP cloud migrations for 5M+ daily events. Deeply invested in high-availability design, operational excellence, and the open-source ecosystem.

EXPERIENCE

Software Development Engineer 2, Authn-SDKs | Auth0 (Okta)

July 2024 – Present

Primary maintainer of nextjs-auth0 (21M+ monthly downloads, 141% growth in tenure)

Bangalore, India

- **Core Open-Source Maintainer:** Primary maintainer of nextjs-auth0 — a widely used open-source SDK with 21M+ monthly installs and direct enterprise adoption by global orgs. Designed and shipped APIs for token exchange, DPoP, and org-scoped auth. Owned API contracts, caching abstractions, and external integrations. 31 releases across 3 packages in 16 months.
- **New SDK (auth0-hono):** Built and shipped a new open-source SDK from scratch. 8,100+ lines of code, 291 tests, multi-runtime (Node, Cloudflare Workers, Deno, Bun). Shipped in 4 weeks from gap analysis to production.
- **High-Availability Design:** Rewired SDK from single-domain to dynamic per-request resolution with zero breaking changes and automatic session migration. Designed for backward compatibility and incremental rollout — the same principles that govern safe cloud infrastructure releases.
- **MFA Step-Up:** Shipped full MFA flow (challenge, verify, enroll) for Next.js SDK. First server-side Auth0 SDK with this capability. Design to production in 5 weeks.
- **Security & Operational Excellence:** Patched critical cache poisoning vulnerability affecting all Next.js users globally. Owned incident coordination and cross-team fix rollout. Maintained high test coverage, monitoring, and release discipline across all packages.
- **Technical Direction:** Authored 15+ design docs. Drove 10+ architecture decisions in cross-team reviews. Mentored junior engineers and interns.

Software Development Engineer 1, B2B-Subscriptions | ZEE5

August 2022 – July 2024

Scaling video streaming platform for 65M+ monthly active users

Bangalore, India

- **Mirage:** Built distributed microservice handling **4,000 requests/sec** for **40M+ B2B users** (60% of ZEE5's revenue). Java backend with async processing, retry logic, and multi-region reliability.
- **Cloud Migration:** Led zero-downtime **AWS to GCP** migration including PostgreSQL to Cloud Spanner for 5M+ daily events. Full schema migration, query rewrite, and rollback strategy. Cut DB latency to under 10ms.
- **Platform Rewrite:** Migrated Node.js services to **Java WebFlux**. **10x throughput**, zero regressions, zero downtime.
- **Distributed Subscription Orchestrator:** Built distributed subscription orchestrator handling massive concurrency with automatic failover across multi-step entitlement flows. **99.9% uptime** while cutting cloud spend.

KEY PROJECTS

OPAL: Real-time Log Analytics (Auth0 Hackathon Finalist) | ClickHouse, S3, Kafka, Benthos, Cube.js

- Built streaming analytics pipeline ingesting **13k events/sec** with column-oriented storage (130:1 write-read efficiency). Architecture mirrors Apache Hudi-style transactional lakehouse patterns: stream (Kafka/Benthos) → durable columnar store (ClickHouse) → low-latency query layer — the same ingestion model Onehouse is built on.
- Estimated **\$70k/month savings** over existing solution. Live dashboards and log search via RESTful APIs.

Forge: Agentic AI Development Workflow Engine | TypeScript, Claude Code, State Machines

- Built multi-phase agentic AI orchestrator automating the full software lifecycle. Uses structured state machines for long-running, multi-step task coordination.
- Used to ship two major SDK features in production. Adopted by team for AI-assisted development.

TECHNICAL SKILLS

Languages: Java, Go, TypeScript, Python

Frameworks: Spring WebFlux, Node.js, Next.js, Hono

Infrastructure: Docker, GCP, Cloudflare Workers, CI/CD, Kafka

Databases / Caching: PostgreSQL, Cloud Spanner, Redis, ClickHouse, MySQL

Practices: Distributed systems design, high-availability architecture, API design, operational monitoring, release management, open-source maintenance, TDD, Agile

EDUCATION

BMSIT, Bangalore

Bachelor of Technology, Computer Science

2018 – 2022

Bangalore, India
